

Assignment 1 - Build Your personal website

Deadline Saturday, Feb 12- 11:59 PM

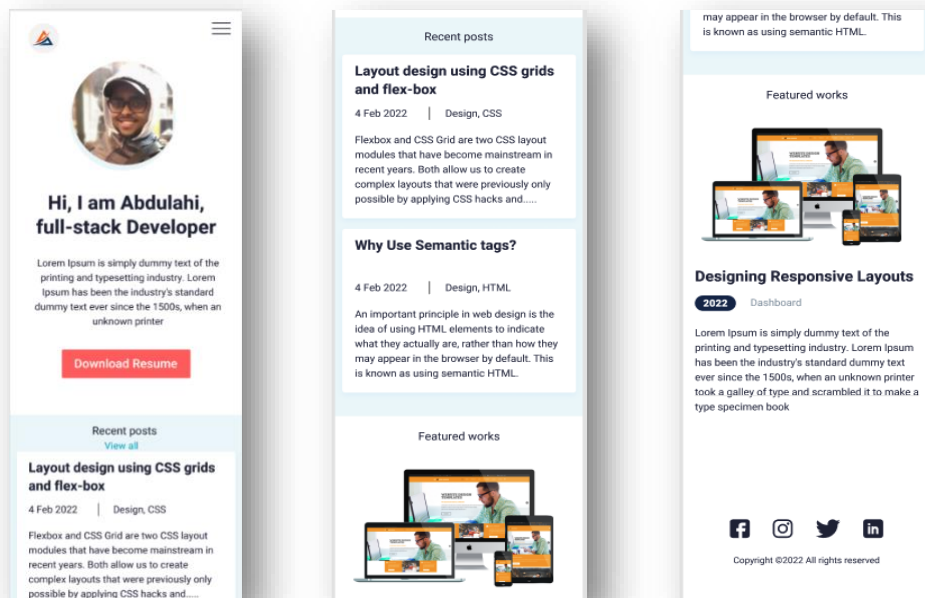

Replicate the following website using your own content and the HTML and CSS concepts that you have practiced in the Labs 1 to 4.

Note: The website is a personal website, so the content should be your own content and not what is shown in the picture. Your profile image is (optional) you can use any avatar, incase you do not want to add your own. Also, you are allowed to use any font, images and background that you like as long as the **page layout design resembles** the one given below, and you apply the following concepts.

1. All the pages should use the [HTML 5 Sematic tags](#) that you have seen in the previous labs.
2. Use the [flexbox](#), [grid](#) and [media queries](#) to define a responsive pages layout
3. Use [font-awesome](#) to add icons to the website and [Google fonts](#) for the website font.
4. You can use beautiful box shadows from [getcscScan](#) website as shown in the lab.

Detail Description of the Website

1. Create a project named “<Your Name> Personal Blog “
2. Create the following three pages, **home.html**, **blog.html** and **contact.html**
3. After completing the assignment, all the pages should resemble the images shown
4. When the user cursor gets over the links, you should indicate the focused item, by changing the color , making it underlined etc..

The home page in smaller devices < 60rem

Layout design using CSS grids and flex-box

4 Feb 2022 | Design, CSS

Flexbox and CSS Grid are two CSS layout modules that have become mainstream in recent years. Both allow us to create complex layouts that were previously only possible by applying CSS hacks...

Why Use Semantic tags?

4 Feb 2022 | Design, HTML

An important principle in web design is the idea of using HTML elements to indicate what they actually are, rather than how they may appear in the browser by default. This is known as using semantic HTML.
